Applicant: Bassey Riman
London, UK | www.basseyriman.com

1. QUICK PERSONAL INTRODUCTION

2. WHY DO YOU WANT TO COME TO / REMAIN IN THE UK?

The United Kingdom provides the world's most dynamic, ethically grounded ecosystem for Artificial Intelligence and digital healthcare innovation. Through the UK National AI Strategy, the NHS AI Lab, and world-leading academic centres, the UK is uniquely positioned as the global standard-bearer for safe, transparent, and clinically deployable artificial intelligence.

Having completed my postgraduate research in Artificial Intelligence at Teesside University under Professor Claudio Angione, the UK served as the foundational launchpad for my innovations. My research paper on explainable Vision Transformers for Alzheimer's detection (submitted to Elsevier Neuroscience Informatics, Ref: NEURI-D-26-00238R1) was formulated within the UK academic framework. The UK's commitment to early diagnosis of neurodegenerative diseases aligns directly with AlzDetect. Furthermore, London's venture ecosystem, digital talent density, and regulatory maturity provide the ideal environment to commercialize RimansTech Industries, scale our product suite, and build lasting partnerships with UK institutions. Remaining in the UK allows me to deepen these roots and contribute directly to national technological leadership.

3. WHAT IS YOUR PLANNED OCCUPATION IN THE UK?

My planned occupation in the United Kingdom is to serve full-time as Founder and Principal AI Architect of RimansTech Industries (rimanstech.com). In this role, I direct our strategic product roadmap, lead applied machine learning research, and oversee the engineering and commercialization of our software ecosystem.

My operational roadmap over the next three to five years focuses on:

1. Clinical AI Translation (AlzDetect): Completing the peer-reviewed publication of our Vision Transformer research and pursuing clinical pilot partnerships with UK NHS trusts, neuroimaging clinics, and dementia research charities (such as Alzheimer's Research UK) to deploy our 12-layer attention rollout interpretability engine as an assistive diagnostic tool for clinicians.
2. Commercial Product Scaling (VoiceDress & Pointly): Expanding VoiceDress's multi-stage diffusion try-on engine and Pointly's enterprise browser navigation assistant into recurring SaaS revenues, generating high-skilled digital jobs and subscription exports from the UK.
3. Interactive AI Literacy (AI Quest & Young AI Explorers): Commercializing AI Quest via tabletop and digital editions--supported by London industry showcases such as our playtesting event at cloudM Tower of London--and scaling the Young AI Explorers platform across UK schools.

4. WHICH REGION OR CITY OF THE UK ARE YOU PLANNING TO LIVE IN?

I am based in and planning to permanently reside in London, United Kingdom.

London is the undisputed epicentre of European digital technology, venture finance, and artificial intelligence research. Locating RimansTech Industries in London provides direct proximity to:
- Leading healthcare and biomedical institutions, including King's Health Partners, Imperial College Healthcare NHS Trust, and UCL Queen Square Institute of Neurology, which are essential for advancing AlzDetect's neuroimaging trials.
- The UK's premier tech clusters and developer networks across Shoreditch, King's Cross, and the City of London.
- Flagship networking venues where I host industry initiatives, such as our scheduled AI Quest playtesting showcase at cloudM Rooftop Bar, citizenM Tower of London (EC3N 4DJ). London enables me to recruit top-tier engineering talent, collaborate with researchers, and represent UK digital innovation globally.

5. HOW WILL THE UK DIGITAL TECHNOLOGY SECTOR BENEFIT FROM YOUR WORK?

My work delivers tangible, multifaceted benefits to the UK digital technology sector across four pillars:

1. Healthcare AI & NHS Diagnostic Efficiency: By delivering an explainable Vision Transformer (ViT-B/32) architecture achieving 99.00% accuracy and 0.9994 ROC-AUC across 5,120 brain MRIs, AlzDetect provides clinicians with interpretable visual attention maps that pinpoint early hippocampal and cortical atrophy, supporting earlier clinical intervention and reducing long-term dementia care burdens.
2. Economic Value & High-Skilled Employment: As RimansTech Industries scales its commercial products (VoiceDress and Pointly), we will create high-value digital jobs in London--hiring machine learning engineers, full-stack developers, and UX researchers--while expanding domestic software revenue anchored in the UK.
3. Closing the National AI Skills Gap: Through Young AI Explorers and my ongoing school donation initiative (recently donating copies to London schools including Harris Primary Academy Haling Park), I am actively cultivating early computational literacy among Key Stage 2 and 3 pupils, inspiring the next generation of diverse UK computer scientists.
4. Thought Leadership & Open Source: Maintaining 22 public open-source repositories and authoring technical tutorials on Medium strengthens the UK developer ecosystem, fostering a culture of practical, ethical AI engineering.

SUMMARY OF SUPPORTING APPLICATION EVIDENCE & FORMAL ENDORSEMENTS

This personal statement is accompanied by a full dossier of verified primary evidence, including:
- 3-Page Executive Curriculum Vitae (referencing all 10 evidences and official verification website: www.basseyriman.com).
- 10 Verified Supporting Evidence Dossiers (strictly 3 pages each, zero visa buzzwords, losslessly optimized <1.5 MB each).
- 3 Formal Recommendation Letters from Senior Digital Tech Leaders:
  1. Prof. Claudio Angione (Professor of AI, Teesside University, UK) -- Academic & Research Recommendation.
  2. Barry Evans (Director of Workplace Technology, Deloitte UK) -- Enterprise Industry Recommendation.
  3. Dr. Ademola Adewara (Principal Medical Officer, Federal Medical Centre) -- Clinical & Medical AI Evaluation.
