BASSEY RIMAN: NATIONAL MEDIA RECOGNITION PORTFOLIO

Compiled by Bassey Riman (AI Engineer, Healthcare AI Researcher & Author) | Overview of My Press Features, Original Captures & Outlet Credibility

OVERVIEW: MY NATIONAL PRESS FEATURES IN VANGUARD & THE NATION

This portfolio compiles two national newspaper features covering my work in Artificial Intelligence, Healthcare AI research, and STEM education -- published in two of the largest-circulation Tier-1 daily newspapers, Vanguard Newspaper (vanguardngr.com) and The Nation Newspaper (thenationonlineng.net):

1. Feature 01 -- My AI Education & Thought Leadership (Vanguard News, March 9, 2026): Written by journalist Chioma Okoye under the headline "Students must prepare for an AI-driven world -- Riman", featuring my perspective on AI as the operating system of modern life, foundational AI literacy in schools, and responsible AI deployment.
2. Feature 02 -- My Medical AI Research (The Nation, March 27, 2026): Published by the Education Desk, covering my development of AlzDetect (https://www.alzdetect.live/), a Vision Transformer (ViT) and Explainable AI system I designed to detect and stage early Alzheimer's disease from brain MRI scans.

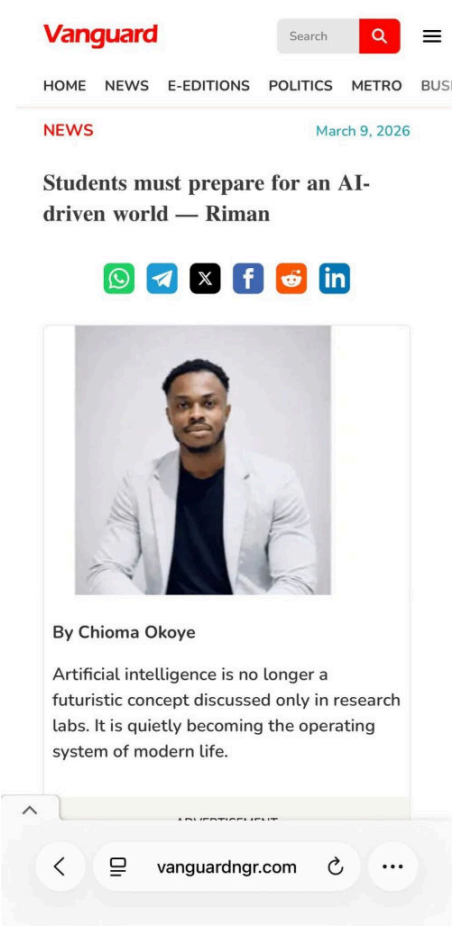

SUMMARY OF MY PRESS FEATURES

Compiled By:	Bassey Riman (UK-Based AI Engineer)
Feature 01 Outlet:	Vanguard Newspaper (vanguardngr.com)
Feature 01 Date:	March 9, 2026 | National News Desk
Feature 01 Byline:	By Journalist Chioma Okoye
Feature 02 Outlet:	The Nation (thenationonlineng.net)
Feature 02 Date:	March 27, 2026 | Education Desk
Feature 02 Focus:	My AlzDetect ViT & Explainable AI
My Live Platform:	https://www.alzdetect.live/
My Published Book:	Young AI Explorers (ASIN: B0H4KGNW3B)

SEC 01 ORIGINAL PUBLISHED NATIONAL NEWSPAPER CAPTURES: VANGUARD (MAR 9) & THE NATION (MAR 27)

FIG 1.1: VANGUARD NEWSPAPER (MARCH 9, 2026 | BY CHIOMA OKOYE)

Feature 01 -- Vanguard Newspaper (March 9, 2026, By Chioma Okoye): "Students must prepare for an AI-driven world -- Riman" (vanguardngr.com)

FIG 1.2: THE NATION NEWSPAPER (MARCH 27, 2026 | EDUCATION DESK)

Feature 02 -- The Nation Newspaper (March 27, 2026, Education Desk): "UK-based AI researcher develops vision transformer system to detect early Alzheimer's from brain scans"

SEC 02 PUBLICATION STANDING, READERSHIP REACH & HOW MY WORK WAS FEATURED

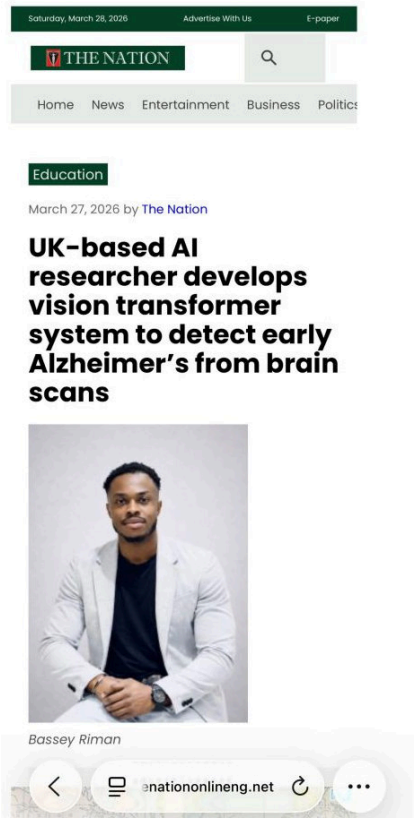

TIER-1 NATIONAL DAILIES

NEWSPAPER & PUBLISHER	NATIONAL CIRCULATION & READERSHIP STANDING	DATE, DESK & BYLINE	HOW MY WORK WAS FEATURED
01. Vanguard Newspaper (vanguardngr.com) **Publisher: Vanguard Media Ltd** **Founded: 1984**	Tier-1 National Daily Newspaper of Record (est. 1984) and one of the highest-traffic digital news platforms in Nigeria and West Africa, serving millions of daily print and online readers across business, policy, technology, and education.	National News Desk Published: March 9, 2026 Byline: Chioma Okoye Section: News	Features my commentary on how AI is becoming 'the operating system of modern life' across healthcare, finance, and logistics, and why schools must teach foundational AI literacy and critical thinking.
02. The Nation Newspaper (thenationonlineng.net) **Publisher: Vintage Press Ltd** **Founded: 2006**	One of the largest-circulation national daily newspapers nationwide (est. 2006), widely recognized for its dedicated national Education, Science, and Technology editorial desks covering academic and industrial innovation.	Education & Research Desk Published: March 27, 2026 Byline: The Nation Photo Caption: Bassey Riman	Covers my work as a UK-based AI researcher developing AlzDetect, the Vision Transformer (ViT) and Explainable AI system I trained on ADNI brain MRI scans to classify four diagnostic stages of Alzheimer's disease.

SEC 03 THE NATION NEWSPAPER FEATURE (MARCH 27, 2026): MASTHEAD, MY CAPTIONED PORTRAIT & URL

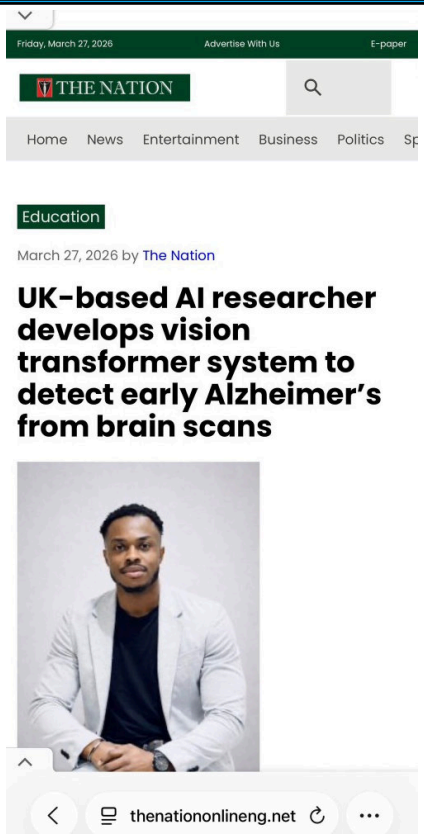

THENATIONONLINENG.NET

SEC 04 FULL VERBATIM NEWSPAPER TEXT & MY DIRECT QUOTE PUBLISHED IN THE NATION (MARCH 27, 2026)

VERBATIM NEWSPAPER TEXT

PUBLISHED HEADLINE (THE NATION, MAR 27, 2026): "UK-based AI researcher develops vision transformer system to detect early Alzheimer's from brain scans"

Verbatim Newspaper Text (Part 1 -- Published March 27, 2026 in The Nation):
"A UK-based artificial intelligence researcher, Bassey Riman, has developed a machine learning system that could help improve early detection of Alzheimer's disease by analysing brain MRI scans.

Bassey Riman, an AI engineer and recent MSc Artificial Intelligence graduate from Teesside University, United Kingdom, has designed a system called AlzDetect, which uses a deep learning architecture known as a Vision Transformer (ViT) to classify stages of Alzheimer's disease from neuroimaging data.

Alzheimer's disease remains one of the most pressing neurological health challenges worldwide. Early diagnosis is particularly difficult because the structural brain changes associated with the disease can be subtle during the initial stages. Researchers have increasingly turned to artificial intelligence to detect patterns in medical images that may be difficult for the human eye to identify."

Verbatim Newspaper Text (Part 2 -- Explainable AI, ADNI & Web Prototype):
"Riman's research focuses on combining transformer-based machine learning models with explainable AI techniques, allowing clinicians to not only receive predictions from the system but also visual insights into how the model reached its conclusions.

'The goal is not just to build a high-accuracy model,' Riman said. 'In healthcare, it's equally important that AI systems provide interpretable explanations so that clinicians can understand why a decision was made.'

The model was trained using MRI data from the Alzheimer's Disease Neuroimaging Initiative (ADNI), a large international research dataset widely used in neurological research. The system classifies scans into four diagnostic stages: Non-Demented, Very Mild Demented, Mild Demented, and Moderate Demented. Riman also developed a web-based prototype platform that allows users to upload MRI scans and receive automated classifications alongside visual explanations highlighting regions of the brain that influenced the model's prediction."

MY DIRECT STATEMENT QUOTED IN THE NATION NEWSPAPER (MARCH 27, 2026):
"The goal is not just to build a high-accuracy model. In healthcare, it's equally important that AI systems provide interpretable explanations so that clinicians can understand why a decision was made." -- Bassey Riman, quoted in The Nation

SEC 05 KEY PILLARS OF MY MEDICAL AI RESEARCH HIGHLIGHTED IN THE NATION

MY RESEARCH HIGHLIGHTS

01. EARLY ALZHEIMER'S DETECTION

Addressing Subtle Neuroimaging Patterns

The Nation highlighted how my AlzDetect system addresses a pressing global neurological challenge: identifying subtle early-stage structural brain changes across four distinct clinical stages (Non-Demented, Very Mild, Mild, and Moderate Demented) from ADNI MRI scans.

02. EXPLAINABLE AI (XAI) IN MEDICINE

Bridging AI Accuracy & Clinical Trust

The article emphasized my focus on clinical transparency -- combining Vision Transformer models with attention-based visual explanations so doctors can inspect the exact brain regions driving every diagnostic prediction.

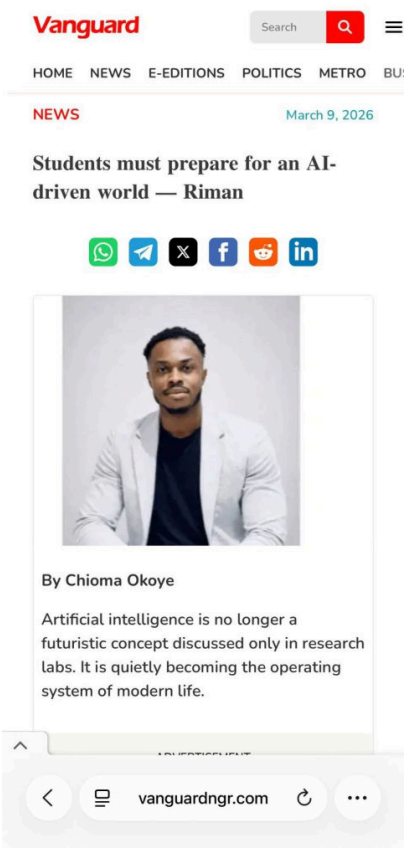

03. REAL-WORLD WEB PLATFORM

From Research to My Live Prototype

The Nation also highlighted how I translated my research into an interactive web-based platform (https://www.alzdetect.live/) where clinicians and researchers can upload MRI scans and receive real-time staging and visual heatmaps.

SEC 06 VANGUARD NEWSPAPER FEATURE (MARCH 9, 2026): MY PERSPECTIVE ON PREPARING STUDENTS FOR AN AI WORLD — BY JOURNALIST CHIOMA OKOYE

FIG 3.1: VANGUARD NEWS FEATURE (MARCH 9, 2026)

LIVE URL:
vanguardngr.com/2026/03/students-must-prepare-for-an-ai-driven-world-riman/

VERBATIM EXCERPTS & SUMMARY OF CHIOMA OKOYE'S FEATURE ON MY WORK

Headline: "Students must prepare for an AI-driven world -- Riman"
Publication: Vanguard Newspaper (vanguardngr.com) | Date: March 9, 2026 | Journalist: Chioma Okoye

1. Verbatim Opening Lead Published in Vanguard News:
"Artificial intelligence is no longer a futuristic concept discussed only in research labs. It is quietly becoming the operating system of modern life." Across sectors ranging from healthcare diagnostics and financial systems to logistics and cybersecurity, intelligent algorithms now underpin everyday decision-making.

2. Addressing the Educational & Skills Gap:
In this feature, journalist Chioma Okoye examined my perspective on how traditional education models -- originally designed for predictable, static career tracks -- are struggling to keep pace with a global economy shaped by machine learning and automation. I emphasized that preparing students for this shift is an urgent priority.

3. AI Literacy as the New Foundational Digital Literacy:
Just as students in the early internet era had to learn computer and information literacy, the next generation must understand how AI systems operate. As I shared in the article, this does not mean every student must become a machine learning engineer; rather, every learner needs a foundational grasp of how data is used, how models generate predictions, and how automated decisions affect society.

4. Critical Inquiry, Algorithmic Bias & Responsible AI:
I also stressed that students must be taught to ask critical questions: how an AI system reaches a prediction, what training data was used, where biases may exist, and how intelligent technologies can be deployed responsibly.

VERBATIM LEAD & CORE MESSAGE FROM MY VANGUARD FEATURE (MARCH 9, 2026):
"Artificial intelligence is no longer a futuristic concept discussed only in research labs. It is quietly becoming the operating system of modern life... equipping students not merely to consume technology, but to understand, question, and build responsibly with intelligent systems."

SEC 07 HOW THESE TWO NATIONAL PRESS FEATURES CONNECT TO MY LIVE PLATFORMS & PUBLISHED WORK — MEDIA TO IMPACT COHERENCE

PILLAR A: MY HEALTHCARE AI RESEARCH (COVERED BY THE NATION)

- National Press Coverage of My UK Medical AI Research: On March 27, 2026, The Nation Newspaper (Education Desk) featured my work as a UK-based AI researcher developing the AIzDetect diagnostic system.
- My Live Public Platform: The Vision Transformer (ViT) and Explainable AI clinical prototype described in The Nation is live and publicly verifiable at https://www.alzdetect.live/ (with my open-source repository at https://github.com/basseyriman/AIzDetect).

PILLAR B: MY AI EDUCATION & STEM BOOK (COVERED BY VANGUARD)

- National Press Coverage of My AI Literacy Advocacy: On March 9, 2026, Vanguard Newspaper (by journalist Chioma Okoye) featured my public advocacy on youth AI literacy and responsible AI governance.
- My Published UK Book & School Donations: I put this advocacy directly into practice through my 37-chapter STEM book, Young AI Explorers: A Kid's Guide to the Future (Amazon UK ASIN: B0H4KGNW3B), and my book donations to UK primary school libraries (including Harris Primary Academy Haling Park, South Croydon, London).
